SUMMARY

Software Engineering graduate with a GPA of 3.68 and hands-on experience building Java and Spring Boot backend systems. Experienced in developing REST APIs, database-driven applications, authentication systems, and back-end business logic using Spring Boot, PostgreSQL, JPA/Hibernate, Liquibase, JWT, Docker, and Git. Built and deployed multiple full-stack applications with Java backends and React frontends, including e-commerce, booking, futsal coordination, and AI-powered PDF processing systems. Seeking a Junior Java Backend Developer role focused on building reliable, maintainable, and scalable backend services.

EDUCATION

Bachelor in Software Engineering, Gandaki College of Engineering and Science

Pokhara, Nepal

GPA: 3.68

Relevant Coursework: Data Structures & Algorithms, Distributed Systems, Network Programming, Software Testing

TECHNICAL SKILLS

Languages	Java, SQL, JavaScript, TypeScript, Python
Backend	Spring Boot, Spring MVC, Spring Data JPA, Hibernate/JPA, REST APIs
Database	PostgreSQL, MySQL, MongoDB, Liquibase, Database Design
Security	JWT Authentication, Role-Based Access Control, Secure API Design
Tools	Git, GitHub, Docker, Postman, Gradle, Maven, OpenAPI/Swagger
Frontend	React, HTML, CSS, REST API Integration

EXPERIENCE

Backend Developer Intern

Nepal

Wow FinStack Nepal

- Developed and enhanced backend services for a temple management platform using Java, Spring Boot, PostgreSQL, and REST APIs.
- Designed and implemented normalized database schemas for events, bookings, and community modules with maintainability and scalability in mind.
- Implemented JWT-based authentication and improved request handling by transitioning from header-based user context to secure token-based authentication.
- Optimized API responses and database access by reducing redundant calls and improving backend efficiency.
- Contributed to event management, booking workflows, and PDF generation features.
- Collaborated in a team-based development environment using Git, Postman, and Docker.

PROJECTS

Spring Commerce – E-Commerce Backend

[GitHub](#) [Live](#)

Java, Spring Boot, Spring Data JPA, PostgreSQL, Liquibase, Gradle, React

- Developed a Java Spring Boot e-commerce backend with REST APIs, JPA-based persistence, PostgreSQL integration, and request validation.
- Implemented database schema management and version-controlled database migrations using Liquibase.
- Designed backend APIs for integration with a separately deployed React frontend.

- Structured backend components to support maintainable business logic, persistence, and API development.

PDF AI – AI-Powered PDF Summarization

[Backend](#) [Live](#)

Java, Spring Boot, Spring AI, WebFlux, REST, Validation, OpenAPI, Log4j2, React

- Developed a Java Spring Boot backend for processing PDF documents and generating AI-assisted summaries.
- Integrated Spring AI document processing capabilities to extract and process PDF content before sending it through the AI workflow.
- Implemented REST APIs, request validation, API documentation, and structured application logging.
- Integrated the backend with a React frontend and packaged the application for deployment using Docker.

AFC Futsal – Create, Group & Vote to Play

[Live](#) [GitHub](#)

Java Backend, React, REST APIs, PostgreSQL

- Developed a Java backend for a futsal coordination platform allowing users to create games, organize players into groups, and vote on participation.
- Implemented backend business workflows for game creation, player participation, grouping, and voting.
- Integrated the Java backend with a React frontend and deployed the application for end-to-end usage.

BookTheThing – Microservices Booking Platform

Java, Spring Boot, PostgreSQL, JWT, REST, Maven

- Developed a microservices-based booking platform consisting of API Gateway, authentication, user, metadata, booking, and futsal services.
- Implemented JWT-based authentication and role-based access control across distributed services.
- Designed normalized PostgreSQL schemas with structured status management and complex business rules.
- Implemented vendor availability, automated booking workflows, and secure service-to-service communication.
- Developed API documentation, fault-tolerant error handling, monitoring, and integration tests.

ElectroX – E-Commerce Platform

Laravel, MySQL, JavaScript

- Developed an e-commerce platform with authentication, product listings, filtering, cart management, and order workflows.
- Built an administrative dashboard for managing products, categories, and orders.
- Collaborated on eSewa payment integration and optimized database design following MVC architecture.

EXTRA-CURRICULAR ACTIVITIES

- Developed self-driven backend projects using Java, Spring Boot, PostgreSQL, React, Docker, and cloud deployment platforms.
- Enhancing cybersecurity skills through defensive security training on TryHackMe.
- Participating in technology events, workshops, coding competitions, and WordPress-related events.
